receiving an ASP transaction request having a user identifier from said

user via a communications network;

determining whether a document profile exists for said user identifier

received, said document profile indicating at least one available ASP configured

to perform document management;

sending to said user a document manager interface screen based on said

determination of whether a document profile exists, said document manager

interface screen indicating the at least one available ASP indicated by the

document profile;

selecting said at least one available ASP for processing said transaction

request from said document manager interface screen; and

transmitting instructions for performing said transaction request, via said

communications network, to said selected ASP which uses said instructions to

perform said transaction request.

2

Claim 6..   The method of Claim 1, wherein said step of selecting said at least one

available ASP comprises selecting a basic ASP using said document profile

selection received.

Claim 11.   The method of Claim 10, wherein said step of selecting said at least one

available ASP comprises selecting a basic ASP that performs typical services

utilized with said document type selection received.
